ATTENTION  
THIS CHART CONTAINS OFF ROUTE OBSTRUCTION CLEARANCE ALTITUDES (ORCA).  
The off route obstruction clearance altitudes shown in quadrangles bounded by dotted lines of latitude and longitude are represented in THOUSANDS and HUNDREDS of feet above mean sea level. The ORCA is based on information available concerning the highest known features in each quadrangle, including terrain and obstructions. ORCA provides obstruction clearance with a 1000 foot buffer in designated non-mountainous areas and a 2000 foot buffer in designated mountainous areas within the United States. For areas in Mexico and the Caribbean which are located outside of the U.S. AIZ, ORCA provides obstruction clearance with a 2000 foot buffer. This altitude is provided for obstruction clearance only; it does not provide for NAVD83 ground coverage or communication coverage, and would not be consistent with altitudes assigned by ATIS traffic control.  
Example: 12,300 feet
